Study program / course:	Mechanical Engineering
Type and level of study:	Master academic studies

Course: Testing of motor vehicles and engines II

Lecturers: Rajko R. Radonjic, Ph.D., full professor

Status of course: Elective, joint for module M3 and module M8, III semester

Number of ECTS: 6
Precondition: **none**

The objective of course

The basic objective is to educate the student in the area of advanced techniques of design, selection and making use of measuring systems for vehicle testing, from the aspect of operational loads, performances, reliability and safety.

The outcome of course

Student should learn to analyze the problem from the area of testing of motor vehicles and engines from the aspect of measuring system, to design corresponding measuring installation, to analyze experimental data and to present the experimental results.

Syllabus

Theoretical study

Vehicle testing – types, methodologies, measurands and technical regulations. Basic design of measurement systems for vehicle testing. Measurement signals, sensors, computer based data acquisition – CAT systems. Analysis of measurement results, influences on measurement results, influence of human factor, modern software for experimental data analysis. Experimental installations for testing of operational loads, performances, reliability. Identification of vehicle's influence on environment – vibration comfort parameters, noise, exhaust emission gases, road damage. Methods for monitoring the traffic flow. Testing the indices of active and passive vehicle safety.

Practical Studies:

Verbal and laboratory exercises: Practical work with measurement equipment – use of sensors, forming of experimental installations, data acquisition, analysis and processing of recorded data. Demonstration of modern experimental installations and installations from the laboratory for motor vehicles assigned for testing of operational loads, performances, reliability and vehicle safety and its influence on environment. Within the framework of study research, the students will be qualified for basic research in the area of this course.
